Subject: Fourth Review of Notice of Intention to Commence Large Mining Operations,
Lakeview Rock Products, Inc., Beck Street Quarry, M/035/020, Salt Lake County,
Utah

Dear Mr. Larson:

The Division has completed a review of your third response received May 31, 2005, to the Division's technical review sent to you on January 3, 2005 for the Beck Street Quarry, located in Salt Lake County, Utah. After reviewing the information, there are still a few comments that need to be addressed before tentative approval may be granted.

Please address only those items requested in the attached technical review by sending replacement pages of the original notice using redline and strikeout text within 30 days or by September 23, 2005. When these additional items are adequately addressed, we will be prepared to issue tentative approval which will require publishing in the local newspapers for a 30-day public comment period. If no adverse comments are received during the public comment period, final approval can then be issued when the final surety has been posted and the Reclamation Contract has been approved.

The Division will suspend further review of the Beck Street Quarry Notice of Intention until your response to this letter is received. If you have any questions in this regard please contact me or Doug Jensen of the Minerals Staff. Thank you for your cooperation in completing this permitting action.

Sincerely,

Susan M. White
Mining Program Coordinator
Minerals Regulatory Program

FOURTH REVIEW
NOTICE OF INTENTION TO COMMENCE LARGE MINING OPERATIONS

Lakeview Rock Products, Inc.
Beck Street Quarry

M/035/020
August 22, 2005

R647-4-104 - Filing Requirements and Review Procedures

The Division's cover letter suggests that replacement pages to the plan be returned to our office utilizing redline and strikeout to highlight changes in the latest submission. Changes to the text of the November 16, 2004 submission were found in your latest submission, which were not highlighted. Some text has also removed without using strikeout to denote this change.

To enable the Division to review your latest submission without having to refer back to the other review response, we request that a review of this latest response be made and all changes and plan be shown utilizing the redline and strikeout method. (DJ)

R647-4-106 - Operation Plan

106.2 Type of operations conducted, mining method, processing etc.

The initial application identified a total of 11.2 acres which was to remain Open Space. Additional areas have been added to the permit as a result of a land purchase, and now the area to be excluded totals only 11 acres. Please explain. (DJ)

106.6 Plan for protecting & redepositing soils

The latest submission of the plan states, "There are approximately 12 acres of relatively undisturbed ground in the area of the proposed new mining."

A previous reference to this additional area identifies a total of 16 acres being added to the mine disturbance. Please explain. (DJ)

R647-4-110 - Reclamation Plan

110.2 Roads, highwalls, slopes, drainages, pits, etc., reclaimed

The plan states a 966 loader will be used to dig a trench berm system above the highwall. Trenching with a 966 loader will be very difficult in the area of the safety berm; the Division suggests that the use of a trackhoe be considered. (DJ)

110.5 Revegetation planting program

The revegetation, ripping, seeding and placement of composted manure of 4.27 acres of set back have been removed from the plan. Please explain. (DJ)

The plan says 10 tons per acre of composted manure will be applied to the pit floor. This is a change compared to the previous plan and was not highlighted. Please change the plan to show five tons per acre of composted manure being added to the soil on the pit floor. Ten tons per acre is likely to promote weed growth. (PBB)
